

# meywalk 2000

---

- Moves up and down during gait, allowing for a more normal heel strike, toe off and mid phase during gait
- Spring assist system to aide the user to “swing through” during gait
- **No more lifting to stand** .... the Meywalk has a “lever lift” system. The user transfers in at their wheelchair seat height and is brought into standing by pushing down on the lift bar

## Wide range of accessories....

Midline leg separator

Hip pads

No Roll Back Brakes

Drag Brakes

Anti tippers (req'd with no back and drag brake options)

Other available options: castor swivel locks, height lowering kits

---

**Finally... a Gait Trainer with Dynamic Movement to promote normal gait motion!**

| Sizing           | Medium | Large  |
|------------------|--------|--------|
| Ring Height      | 33-40" | 41-51" |
| Seat Height      | 21-29" | 27-37" |
| Max users weight | 220 lb | 220 lb |

Width of trunk req'd when ordering

**Ease in Transfers!!!**

To lower the seat and allow for transfer, first lock the unit, lower the tail gate and open the ring. Press the two silver buttons on the front of the walker and raise the lift bar which lowers the sit bar. After the user transfers, close the ring and tail gate, and push down on the lift bar.

**The lever lift bar easily lifts the user into standing!**

**Dynamic Gait Movement**

The Meywalk moves up and down with each step, allowing the user to come down into a heel strike and toe off. As the user steps forward, the spring assists with the swing through phase of gait
